COURSEWORK

UNDERGRADUATE

Intro to Programming

Data Structures

Computer Architecture

Object-Oriented Programming

Operating Systems

Discrete Mathematics

Algorithms & Complexity

Computer Graphics

Software Engineering

Programming Correctness & Efficiency

Android Mobile Computing

SKILLS

PROGRAMMING LANGUAGES

Java • Javascript • Python • PHP •

HTML • CSS • C++

FRAMEWORKS

Java Spring • Node • Angular

TOOLING

Docker • Jenkins

LANGUAGES

Japanese (intermediate)

EXPERIENCE

QUALTRICS | Software Engineer II

October 2019 - Present | Seattle, WA

- Collaborating across 4 teams, I was the project lead designing and implementing Qualtrics' platform solution for assigning sentiment to survey choices

QUALTRICS | Software Engineer I

July 2017 - October 2019 | Seattle, WA

- Transitioned the Employee Experience dashboards exports from a custom solution to the platform, and found an optimization halving the number of data requests
- Implemented 2 widgets for visualizing data utilizing D3 and Angular making up 53% of widget creation on Employee Experience dashboards
- Promoted Jest for API tests which was adopted across the organization and increased the number of API tests in a quarter by 36% (780 to 1068)
- Drives operational improvements of 4+ services through metrics, alerting and oncall
- Spread knowledge across the organization with brownbags on ETL in Qualtrics' datapatform, Dimensional Modeling, and War Games
- Worked with Java Spring, Node, Angular, MySQL

WIZEHIRE | Software Engineering Intern

June 2016 - May 2017 | Austin, TX

- Worked on Web Application Team
- Constructed an automated reminder to finish applications e-mail increasing completion rate by 10%
- Overhauled the mobile application experience improving job seeker conversions by 100%
- Built a custom deployment manager to deploy WizeHire code with a single button click
- Create an improved UI/UX experience for posting jobs, allowing drafts, and editing
- Created a fail-safe mechanism which prevented entries with missing fields to be inserted into the MySQL database
- Worked with Linux, Nginx, and MySQL

PROJECTS

SWECUNE Spring 2016

- Provides information about all Pokemon, types, and learnable moves
- Dynamically populates pages with information retrieved from a RESTful API
- Implemented a RESTful API that retrieves data from a MySQL database using SQLAlchemy
- Implemented the types page that provided information about possible Pokemon Types found in the Pokemon games
- Source Code: <https://github.com/SThakkar14/cs373-idb>
- Developed in a group of six using Python, MySQL, and React
